

HUBER

Tipping Trough KT

Efficient distribution of screenings

- ▶ Temporary storage of screenings
- ▶ Optimal distribution into containers
- ▶ Particularly suitable after a HUBER Wash Press WAP®

Design and function

The HUBER KT tipping trough is the ideal solution for evenly distributing screenings from wash presses. Designed for maximum reliability and flexibility, the HUBER Tipping Trough KT ensures optimised transfer of screenings to downstream containers. The machine uses a level sensor to detect incoming screenings and start the distribution process.

The automated rotation of the trough allows the screenings to be discharged in one or both directions. This increases the bulk density of the screenings in the container, making them more compact so that the container's capacity is used more efficiently. Manual distribution of screenings in the container by operating personnel is therefore unnecessary.

Versatile and adaptable

Thanks to its variable tipping length of 2 to 6 metres, the HUBER Tipping Trough KT can be tailored precisely to the specific requirements of your plant.

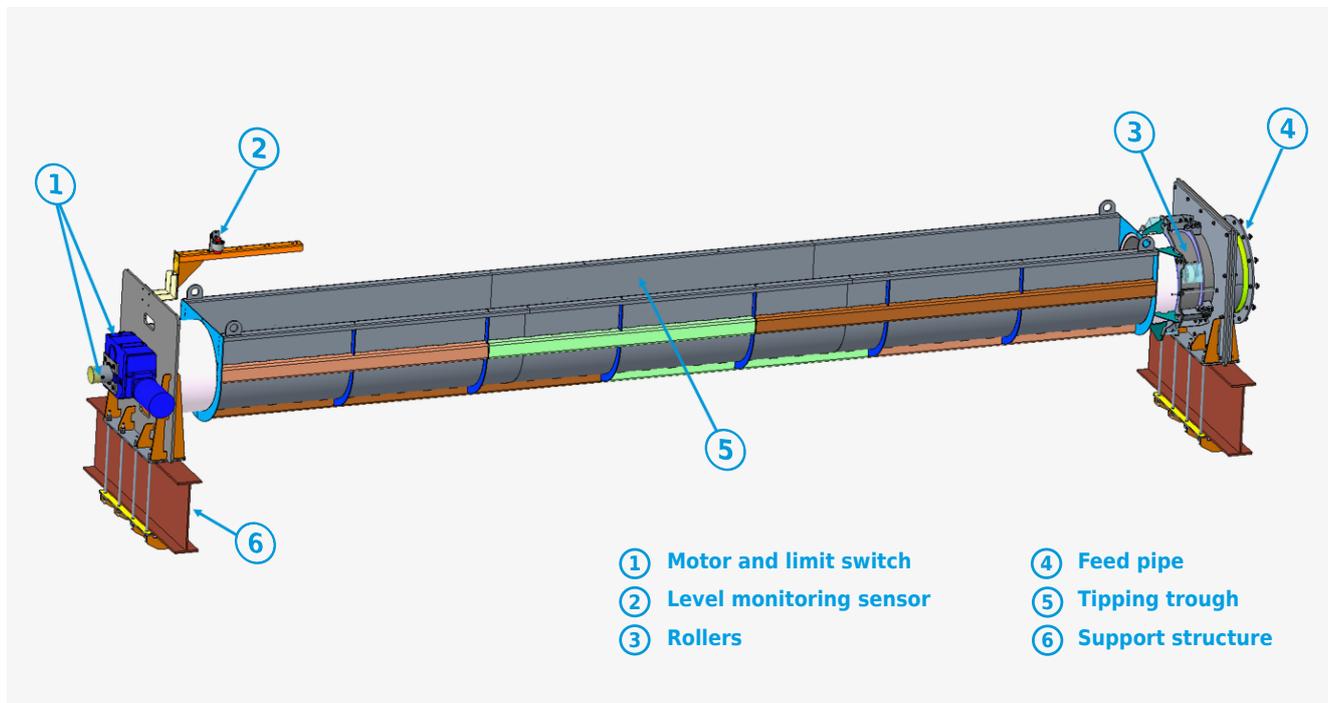

The diameter of the trough is matched to the upstream machine, for which we recommend the use of a HUBER Wash Press WAP®. The robust construction ensures a long service life, even under demanding operating conditions.

Optimal integration

The HUBER Tipping Trough KT is specially designed for use with HUBER Wash Presses. It receives the cleaned and dewatered screenings from the press and distributes them efficiently into a container. Its easy integration into existing HUBER systems makes it the preferred choice for municipal and industrial wastewater treatment plants.

Advantages

- ▶ Flexible tipping length: 2 - 6 m for individual plant configurations
- ▶ Customised trough diameter: DN450 - DN600 for optimal connection to the upstream machine
- ▶ Robust design: for long-lasting, low-maintenance operation
- ▶ Efficient distribution: optimises material flow after screenings treatment
- ▶ Seamless system integration: ideally designed for use with HUBER Wash Presses

Description of the HUBER Tipping Trough KT.
